**Abstract:** This article analyzes the data from a poll among students conducted after conclusion of XVIII International School of Medical Anthropology and Bioethics. We studied demand for the traditional MAaB schools, as well as feedback on the quality of the school workshops, lectures and interactive seminars. Polling was conducted among the sixth year students of the General Medicine Department of Yevdokimov Institute. The poll results were, in many ways, unexpected to the teachers and organizers of the event.
